

Software Engineer | Based in Athens

Would you like to work in a start-up? Collaborate closely with the founders and live the start-up experience?

We are an Athens based start-up, and we are looking for a motivated Software Engineer, with strong technical skills, and teamwork spirit to join our team.

If PHP, MongoDB, MariaDB, CentOS are not just jargon to you, if you have experience in HTML5, CSS3, jQuery and Bootstrap then you might be the one we are looking for.

Responsibilities:

- PHP & Python full-stack development
- Produce maintainable software components that operate as part of a large multi-process cloud system
- Unit test software components to verify behavior and resilience
- Work in close collaboration with the company's CTO

Requirements:

- Experience in software development
- A computing-related/numerate degree
- Demonstrable skills in one or more languages
- Strong problem-solving skills
- Clear, accurate and concise written and verbal communication skills
- Desire to build a career in software development

Alumni Reach Benefits:

- Clear reporting lines
- Fast processes in a friendly working environment
- Chance to grow with the company
- Respect of work-life balance

All information received will be treated with strict confidentiality.
