Position: Senior SecDevOps Engineer

The Senior Security DevOps Engineer works as a member of our Security, R&D and Operations teams and is responsible for the conceptualization, design, implementation & integration of innovative security & data analytics solutions. Works as technical lead for projects, allocating and mentoring the engineering team towards successful implementation.

The SecDevOps Engineer works closely with the 24x7x365 Security Operations team to understand both internal & client requirements and drive the implementation of new detection strategies based on the technologies, information and tactics applicable to the engagement. The position involves a great deal of scripting and use of interpreted languages, as well as the ability to translate red-team tactics into blue-team practices.

At least 4 years of experience in a technical information security position is required with a strong preferences on candidates with hands-on data analytics background.

Responsibilities

- Design and execute SIEM/Data Analytics projects
- Divide and manage vertical technical goals and optimally allocate to the engineering team
- Design, Implement and Integrate security solutions & features in OBRELA centralized Managed Detection and Response platform
- Conceptualize blue-team practices and requirements, based on latest security research Collaboration with security analysts to ensure effective SOC monitoring implementation
- Evaluation of new security technologies, products and integration with our SIEM infrastructure through APIs or custom interfaces

Required skills and expertise

- Experience implementing, maintaining, and supporting a SIEM platform
- Experience building and managing SIEM content for relevant security use cases
- Expert understanding of diverse log formats and source data for data analytics implementations (eg OS, Databases, Firewalls, Applications)
- Sound understanding of network, system and application intrusion techniques and patterns on IT infrastructure
- Linux and Windows security administration, focusing on security, re-usability and performance optimization
- Expert knowledge of TCP/IP networks
- Strong scripting abilities (preferred bash and python)
- Experience with Splunk Enterprise Security will be considered a strong plus
- Experience with Microfocus ArcSight will be considered a strong plus

Required soft skills

- Effective verbal and written communication skills that include the ability to describe highly technical concepts in non-technical terms

OBRELA
SECURITY INDUSTRIES

- Ability to prioritize, organize and manage a complex workload, and to work well under deadlines and pressure
- Ability to respond appropriately to client queries and address effectively troubleshooting needs
- Able to work both as part of a team or under own initiative (without supervision)
- Good interpersonal and communication skills
- Flexibility to work abroad for short timeframes
- Must aspire to a culture of service excellence

Desired skills

MSc and security-related certifications will be considered a strong plus

As part of the interview process, candidates may be required to actually demonstrate their knowledge and expertise in the aforementioned areas.
