Quality Assurance Manager

In this role you will be based out of Athens, Greece. Reporting to the CTO you will be working closely with the product and the development team. You will design and run test scenarios to iron out any bugs and improve the quality of the finished product. You will build on your solid technical background and develop your knowledge and experience in general software test methodologies including requirements gathering, functional tests, customer scenario testing, test plan and test case creation as well as stress, performance and scalability testing. You will become knowledgeable and proficient in using our mobile advertising technology, using your development skills to investigate problems reported. Your responsibilities include:

- Contribute to the entire software development life cycle
- Design, create & implement test scenarios and test scripts
- Design & develop testing tools for test automation & support
- Lead all technical testing efforts including integration testing & performance testing
- Ensure QoS (Quality of Service) levels of software products through performance test benchmarking
- Provide production support of software products by investigating and recreating reported defects
- Work with multiple database interfaces and be familiar with standard web architectures
- Assist in implementation of QA standards and continual improvement activities

EDUCATION AND QUALIFICATIONS
- Bachelor's degree in Computer Science or relevant field
- A minimum of 5 years' experience in software and systems testing, as well as quality assurance
- 4+ years designing and implementing test plans, scripts, and scenarios
- Knowledge of automated tools and languages (like Selenium, etc..)
- Good knowledge of SQL programming language
- Good knowledge and understanding of the software development lifecycle
- Knowledge and understanding of general software testing methodologies
- Some experience in technical documentation writing (UML)
- Solid technical background with commitment towards customers and product quality
- Proficiency in software testing concepts and bug management
- Experience in design and implementation of automated tests
- Experience in a complex deployment process is an advantage
- Excellent oral and written communication skills, both English and Greek
- Exceptional analytic and problem solving skills
- Ability to work both independently with minimal supervision and/or in a team
- Ability to work under pressure in a fast-paced, high-tech environment
- Ability to complete tasks, handle challenges, think creatively and provide quality solutions within tight deadlines and budget

We Offer
- An attractive remuneration package
- To become part of a stimulating, international team
- Exceptional personal growth and career opportunities
